State Energy Data System Data File Codes and Descriptions

Data files in the State Energy Data System (SEDS) are either comma-separated value (CSV) files or Excel files. Each file has a field containing the State Postal Codes, a field containing the mnemonic series names (MSN) of the data series, a field or column headings describing the year, and the data value.

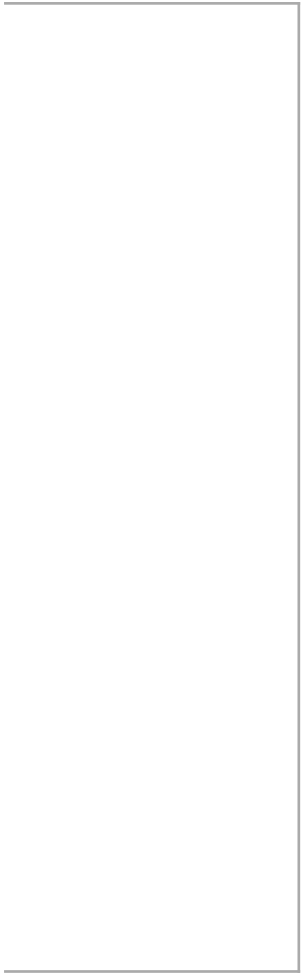

Detailed information are presented in the Data File Documentation and the Technical Notes.

State Energy Data System

Data Series Names (MSN) and Descriptions

The MSNs are five-character codes, most of which are structured as follows:

First and second characters - describes an energy source (for example, NG for natural gas, MG for motor gasoline)

Third and fourth characters - describes an energy sector or an energy activity (for example, RC for residential consumption, PR for production)

Fifth character - describes a type of data (for example, P for data in physical unit, B for data in billion Btu)
